Viechanical Bolt Anch CAL

GENERAL INFORMATION

CALK-IN[™]

Mechanical Bolt Anchor

PRODUCT DESCRIPTION

The Calk-In is a pre-assembled precision cast calking type machine bolt anchor which can be used in concrete, block and brick. It can also be considered for stone. The Calk-In consists of an antimonial lead alloy calking sleeve and a Zamac alloy internally threaded expanded cone. This anchor is not recommended for use in overhead applications or for life safety.

GENERAL APPLICATIONS AND USES

 Windows Screens

- Sliding Doors
- Shutters

FEATURES AND BENEFITS

- + Readily accepts coarse thread machine bolts including sidewalk bolts
- + Internally threaded anchor for easy removability of attachment and service work
- + Shallow embedment

APPROVALS AND LISTINGS

- Federal GSA Specification Meets descriptive characteristics of CID A-A-1922A. Type 1 (formerly FF-S-325, Group 1, Type 1, Class 1)
- Tested in accordance with ASTM E488 in uncracked concrete and masonry

GUIDE SPECIFICATIONS

CSI Divisions: 03 16 00 - Concrete Anchors, 04 05 19.16 - Masonry Anchors and 05 05 19 -Post-Installed Concrete Anchors. Machine bolt anchors shall be Calk-In as supplied by DEWALT, Towson, MD. Anchors shall be installed in accordance with published instructions and the Authority Having Jurisdiction.

Installation Instructions

Step 1 Drill a hole into the base material to the required depth. The tolerances of the drill bit used must meet the requirements of ANSI Standard B212.15. Do not over drill the hole.

· Precaution: Use suitable eye and skin protection. Avoid inhalation of dust during drilling and/or removal.

Insert the anchor into the hole, cone first. Position the setting tool in the anchor with shoulder in contact with the anchor sleeve. Using the tool, set the anchor by driving the sleeve using several sharp hammer blows.

1. Tabulated load values are for anchors installed in uncracked concrete. Concrete compressive strength must be at the specified minimum at the time of installation.

2. Allowable load capacities listed are calculated using an applied safety factor of 4.0. Anchors are not recommended for use overhead or for life safety. Consideration of safety factors of 20 or higher may be necessary depending on the application such as in sustained tensile loading applications.

3. Linear interpolation may be used to determine allowable loads for anchors at intermediate compressive strengths.

4. The tabulated values are for anchors installed at a minimum edge and spacing distance of 12 anchor diameters for 100 percent capacity. Spacing distance is measured from the centerline to centerline between two anchors.

1. Tabulated load values are for anchors installed in minimum 6-inch wide, minimum Grade N, Type II, lightweight, medium-weight or normal-weight concrete masonry units conforming to ASTM C 90. Mortar must be minimum Type N. Masonry compressive strength must be at the specified minimum at the time of installation (f'm ≥ 1,500 psi).

2. Allowable load capacities listed are calculated using and applied safety factor of 5.0. Anchors are not recommended for use overhead or for life safety. Consideration of safety factors of 20 or higher may be necessary depending upon the applications.

3. The tabulated values are for anchors installed at a minimum edge and spacing distance of 16 anchor diameters for 100 percent capacity. Spacing distance is measured from the centerline to centerline between two anchors.
